### ***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

Examiner concurs with Applicant's Remarks in the paper submitted February 12, 2004 that distinguished the instant invention from the prior art. That is, it is well known in the art to use a variable speed motor in connection with a stack height detector and a motor controller to control the delivery of sheets (See e.g., Kuster, US 5, 556,252, Abstract and Fichte et al., US 4,021,710, Abstract). However, the features of an electric motor operable *only in a continuous mode at a variable speed* and a first detector located at the leading face of the stack render the invention novel and non-obvious over the prior art. The prior art is limited to motors that operate in both a discontinuous and continuous mode, intermittently, or although connected to a variable motor controller, function continually at set optimal speeds.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

Any references not explicitly discussed above but made of record are considered relevant to the prosecution of the instant application.
